Information Technology and Information Systems professionals apply their expertise to solve real world problems across industries. They design and support systems, improve business processes, develop mobile and broadband applications, analyse and manipulate big data, design mobile location-based solutions and much more.

**IT at Melbourne**

The University of Melbourne is Australia’s leading educational institution for IT*, and ranked No.1 in Australia and No. 13 in the world for Computer Science and Information Systems.#

Whether you are interested in a professional qualification, a career change, expanding your technical skills or pursuing a new interest, the University of Melbourne has a range of world class IT programs to meet your needs.

Our [Master of Information Technology](#) and [Master of Information Systems](#) are the University’s premier courses for students who wish to pursue careers as technically focused IT specialists or digital business leaders. Both courses are accredited by the Australian Computer Society.

*QS World University Rankings by Faculty 2015-16.
#QS World University Rankings by Subject 2016.
Specialisations
The Master of Information Technology is a technically focused degree for creative students interested in cutting edge technology. As a graduate, you will be able to develop and implement software systems in a wide variety of organisations. You can design and create the latest in mobile and broadband apps, or you can find senior IT roles in growth areas such as cloud computing, eHealth and spatial information technology.

As a Master of Information Systems graduate, your focus will be on systems management. You will be able to work as a practitioner, manager or consultant in digital business, supporting, managing and changing business processes through your knowledge of information and communications technology and information systems.

Job Outlook
According to the Australian Government’s Job Outlook website* (joboutlook.gov.au), employment for ICT professionals is strong, with continued growth anticipated over coming years:
- Employment for ICT Business and Systems Analysts is expected to be above average to November 2019.
- ICT Business and Systems Analysts have a high proportion of full-time jobs (94.8 per cent) and earn high salaries.

*The Data on Job Outlook is updated on a yearly basis and is compiled from national statistics which may not reflect either regional variations or more recent changes in employment conditions.

Develop the skills to succeed in industry
Main of Information Technology (Computing) student Jun Jen Chen enjoys the practical real-world assignments that he gets to work on in his course.

On a recent internship with Infosys in India, Jun Jen noted that he was able to use skills learnt at university on his work projects.

“It is fulfilling to know that not only do I enjoy what I’m studying, it is also what I would be doing in an industry setting.”

Jun Jen says that the assignment work is challenging and rewarding.

“In one of my assignments, I made a social media platform similar to Instagram. Knowing that I can make something that is comparable with industry standards is very satisfying.”

Get the right mix of IT and business

The Master of Information Systems (MIS) has provided Neha Soni with the right mix of business and technical skills.

“Along with the technical know-how, the MIS has helped me develop and enhance fundamental business skills like requirements gathering, communication, problem solving and team building.”

Neha works as a Business Analyst with Deloitte providing advisory and implementation services to a vast range of clients from the public and private sectors.

“Consulting enables me to branch into different roles and projects and gain experience across a range of industries. I enjoy learning about new industries and businesses and getting a taste of what it might be like to work in those settings.”

Alternative Careers

An IT degree at the University of Melbourne gives you solid technical, design foundation combined with strong analytical, problem solving and communication skills. Other areas our graduates have moved into include:

• Management consulting
• Finance, economics and banking
• Business analysis
• Project management
• Technical sales, marketing and communications
• Intellectual property management
• Technical writing
• Teaching
• Government and policy

Careers in Research

If you are passionate about a certain field of IT or Information Systems and would like to advance your research skills, enrolling in a graduate research degree may be a great option for you. Graduate research enhances your ability to problem solve, think autonomously and creatively, and analyse. Careers in research are diverse and may include:

• academic positions at universities;
• policy-making or research positions at public sector organisations;
• private sector research and development projects;
• self-employed consulting positions on technical or policy issues in your area of expertise.

Careers Services and Industry Links

Students undertaking our programs have access to a range of careers services, and benefit from a curriculum that offers excellent opportunities to connect with industry through:

• an elective internship subject
• student projects partnered with industry
• guest lectures led by industry leaders and experts
• site visits hosted by key organisations
• industry networking events
• career panels featuring industry representatives
• career question drop-in service
• an online jobs and internships portal
